

Welcome to:

session 1 python development

introduced by:

youssef muhammed ibrahem

Powered by:

Youssef El-tayel

python programming course

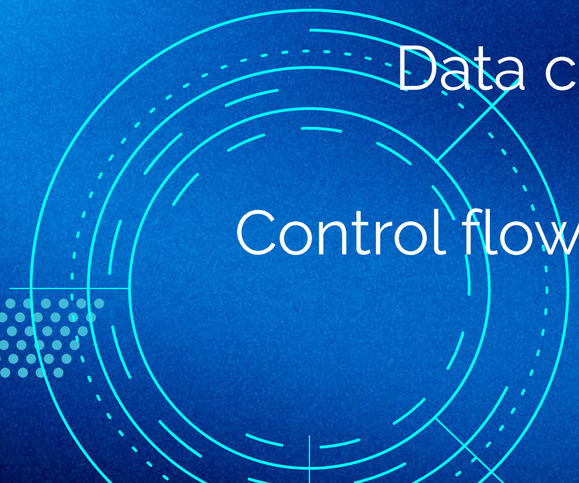

Powered by:

Youssef El-tayel

SESSION AGENDA

- the intro and important advices
- difference between developer & coder
- introduction to python and its importance
- variables & data structure
- Data containers
- Control flow & If conditions

Powered by:

Youssef El-tayel

THE INTRO AND IMPORTANT ADVICES

WHAT IS THE DIFFRENCE BETWEEN?

Developer

idea + code = develport

Coder

copy + paste = coder

Powered by:

Youssef El-tayel

WHY PYTHON ?

Widely Used By: Accountants, network engineers, data scientists, and even children.

AI (Artificial Intelligence) (TensorFlow, PyTorch)

Data Analysis & Visualization (Matplotlib , Pandas, Numpy)

Mobile App Development (Kivy , BeeWare , PySide)

Web Development (FastAPI , Flask , webio)

scientific and numeric & Eduction

Easy to Learn and Write

High-Level Language

Cross-Platform Compatibility

Large & Active Community

Extensive Libraries & Modules

Multi-Purpose Usage

Powered by:

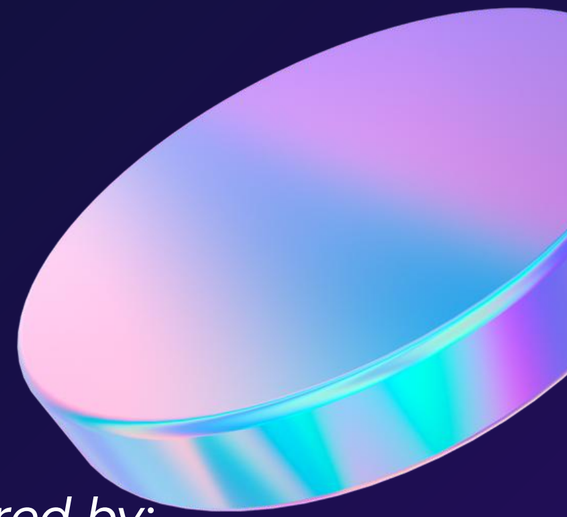

Youssef El-tayel

python versions

"New isn't always the best – old is gold!"

Ranking: 3.12 >3.11> 3.10>3.9 (What about other versions?)

SOME VERSIONS ARE SPECIFICALLY OPTIMIZED FOR :

EDUCATIONAL PURPOSES

Learing python from the platforms and unvirsties and so on

PROFESSIONAL USE

Data science and artificial intellegence and so on

Powered by:

Youssef El-tayel

DATA CONTAINERS

Python provides several built-in data structures (or containers) to organize and manage data efficiently. These include variables, lists, tuples, sets, and dictionaries.

Variables

Variables are regarded as the most fundamental type of data container, analogous to a box that holds a value

VARIABLES 'S IMPORTANCE

Purpose	Example
Storage	x = 10
Readability	user_name = 'bob'
Reusability	greeting = "hello"
Dynamic Updates	count += 1
State Tracking	is_active = false

Powered by:

Youssef El-tayel

DATA TYPES & STRUCTURE

Int = integer values

Float = floating values (decimals)

Str = text & string values

Sequence types : list - tuples - range

Set types : set - frozenset

Boolean types: True - False
